

REMEDIATION

A Tradition of Excellence

PROJECT:

Quinnipiac Terrace

SERVICES:

Remediated 1.65 acres site containing polluted urban fill and bulky waste. Prior to initiation of site remediation, installed a 300 linear foot soil retention system to accommodate the 15-foot deep excavation required for this project.

Removed 40,000 tons of contaminated soil including contaminants such as TPH, SVOC's, VOC's, RCRA metals and RCRA hazardous lead soil. Upon completion of site remediation, imported clean soil to backfill and restore the site to its original condition.

LOCATION:

New Haven, Connecticut
